

# Brief Contents

1	Introduction ( <b>Unfinished</b> )	1
<b>I</b>	<b>Foundations</b>	<b>3</b>
2	Probability ( <b>Unfinished</b> )	5
3	Statistics ( <b>Unfinished</b> )	7
4	Graphical models	9
5	Information theory	67
<b>II</b>	<b>Estimation and inference</b>	<b>105</b>
6	Optimization	107
7	Inference in graphical models	133
8	Variational inference	181
9	Monte Carlo inference	229
<b>III</b>	<b>Prediction</b>	<b>281</b>
10	Generalized linear models ( <b>Unfinished</b> )	283
11	Deep neural networks ( <b>Unfinished</b> )	285
12	Gaussian processes ( <b>Unfinished</b> )	305
13	Robustness and distribution shift ( <b>Unfinished</b> )	341
<b>IV</b>	<b>Generation</b>	<b>349</b>
14	Latent variable models ( <b>Unfinished</b> )	351
15	Flow-based generative models ( <b>Unfinished</b> )	391
16	Energy-based models	393
17	Implicit generative models ( <b>Unfinished</b> )	407
<b>V</b>	<b>Discovery</b>	<b>409</b>
18	State space models	411
19	Graphical model structure learning	459
20	Non-parametric Bayesian models	489
21	Representation learning ( <b>Unfinished</b> )	513

<b>VI</b>	<b>Control</b>	<b>515</b>
22	Reinforcement learning	517
23	Causal models ( <b>Unfinished</b> )	557
